

Denver SRL®

Rubber replacement parts

Denver SRL®

Pump rubber replacement parts

A comprehensive line of soft rubber-lined pumps designed to fit a wide range of pumping applications from corrosive to abrasive slurries.

Rubber wear parts

With over 60 years of experience from thousands of applications we have made continuous improvements to our products.

The benefits to the customers are numerous but most significant is the life time cost saving that will be achieved by using Metso's slurry pumps.

World class production

- Well made products
- Engineering standards
- Manufacturing standards
- Quality assurance
- Modern facilities
- Short lead times
- Parts in stock

Denver SRL pumps are also backed by fully trained field engineers who can troubleshoot problems or provide routine maintenance.

Spare parts are communally available from our stock inventory.

Placing a part order

When placing a parts order, you can help assure correct identification of your parts by providing the following information:

1. Machine description and size
2. Serial number or original Denver number
3. Part number and description
4. Type of construction material
5. Parts list drawing number used to identify required parts.

Production in modern facilities

The production of rubber spare parts is made in a modern facility. All equipment is of a high standard and the production is controlled by SPC (Statistical Process Control). This ensures consistently high product quality.

World class production:

- Well made products
- Engineering standards
- Manufacturing standards
- Quality assurance iso 9001
- Environment iso14000

Rubber Qualities

Metso can supply a number of different materials for slurry pumping. The most common natural rubber. All parts are moulded in the most appropriate materials to meet the duty requirements. With modern equipment and in house production facilities, Metso has developed rubber to optimize service life. Amongst the tools used for testing of elastomer components are:

- Thermogravimetric analyzer
- Gas chromatograph
- Elastomer rheometer
- Relax compression

Storing of parts

All standard rubber wear parts are stocked items. For special rubber compounds Metso has steel inserts in stock to reduce production time.

All warehouses worldwide are connected to a state of the art inventory management system to maximize availability. Original Spare Parts are marked with article numbers and date to allow easy stock rotation at the customers warehouse.

Rubber parts for pumps standard qualities

Trade name	Type	Rubber no.	Skega code		Sala code
ElastaPact	Natural	61 50 068	168	High strength impeller	M1
ElastaSlide	Natural	61 40 010	110	Soft liner material	M1
Special Qualities					
	Natural	61 40 092	192	Handlaying material	M1
MeroPrene	Chloropren	64 50 052	452	Brand name Neoprene	M3
	Chloropren	64 50 050	450	Handlaying material	M3
MeroLen	EPDM	70 50 016	016	Etan-propen rubber	M8
	Chloro-Butyl	62 60 170	270		M4
	Nitrile	63 60 006	306		M5
Polyurethane					M7

Parts designation

61 50 068 gives material code 168.

Example: 61 50 068, 61 = rubber type, 50 shore hardness, 068 register no.

All rubber parts are marked with a white pen, letter Z-1999, A-2000, B-2001 etc. and a week number, with the rubber material code before year code. 20 mm high.

Example: 168B42

Gas chromatograph

Rheometer

Thermogravimetric analyser
